

PROJECT NAME: Milk Collection and Quality Tracking system - Gujarat.

Current Limitations

- The system is currently a prototype and not fully deployed in real-world environments
- Limited integration with automatic milk testing hardware
- User interface is basic and not fully optimized for all users
- Requires stable internet connectivity
- Limited real-world testing across multiple villages

Technical Limitations

- Use of **NoSQL database (MongoDB)** may lead to less strict schema control
- JWT authentication stored on client-side has **security considerations**
- No **offline functionality** available
- System performance not tested for **large-scale usage**
- Limited use of **advanced analytics or AI features**

Future Enhancements

- Development of a **mobile application** for better accessibility
- Integration with **IoT devices** for automatic quality testing
- Implementation of **online payment systems** (UPI/Bank transfer)
- Addition of **AI-based analysis** for quality prediction
- Support for **multiple languages** for rural usability

Real-World Deployment Considerations

- Training staff to effectively use the system
- Ensuring **reliable internet access** in rural areas
- Maintaining **data security and privacy**
- Providing **technical support and maintenance**
- Integration with existing **dairy cooperative systems**
